

Turbocharge SupplyPro

with Renditions, SkuSphere
and SupplyPro Connect

Add-On Services to Gather, Translate and Automate Orders

As a current SupplyPro user, you are already harnessing the benefits of online collaboration with your Builder clients. Now, imagine receiving orders from all your Builders, even those not using BuildPro, into SupplyPro and have all those jobs, orders and schedules flow seamlessly to your production management solution. G.T.A. is a set of services to help further expand and automate your digital relationships.

Automation reduces costly data entry mistakes, accelerates decision making and improves responsiveness. Imagine the cost savings if we could save you 10-15 minutes per order!

Every residential construction business reaches a point where it is no longer beneficial to assign a person to the cumbersome, tedious task of entering, tracking and reconciling work or purchase orders. Put a stopwatch on it. The hours you pay a person to process these tasks could be more valuable when used in working on other, more important areas of your business - if not saved entirely.

Gather with Renditions

Gather new orders automatically into SupplyPro for Builders not using BuildPro.

Consider how simple processing new orders would be if all your Builders were using BuildPro. If there was one place where you can access all your new orders, schedules and changes; that's what our [Gather](#) service will do for you.

- Builder orders from non-BuildPro builders are digitally gathered and made available to you in SupplyPro giving you one consolidated access point for all your orders in the same format.
- Eliminate time currently spent finding orders, printing paperwork, downloading files, etc. and provide your team the opportunity to save valuable time that can be spent on higher-value activities.

Translate with SkuSphere

Translate your Builder orders to material lists for instant fulfillment from warehouse or suppliers.

With repetitive Builder orders for the same products or floorplan and options, the standard process involves manually identifying individual parts or bundles of parts required to complete the orders. With our [Translate](#) service, this process is automated providing you real-time material requirements.

- With every new order, you will receive a list of the required materials that is meaningful to you. You and your Builders will always be speaking the same language so SKU conflicts become a thing of the past.
- Save time, improve accuracy and have the ability of more timely tracking of materials which will facilitate better resource planning.

Automate with SupplyPro Connect

Automate the new order process with seamless integration to your current ERP solution.

Extend the automation of new jobs, orders and scheduling to your back-office system.

With our [Automate](#) service:

- Eliminate redundant data entry that many companies have come to accept and budget for as necessary overhead.
- In addition to time savings, you will also benefit from having consistent data between systems which ensures all users are planning and making decisions based on the same information.
