# HYPHEN INSPECTIONS™

# Using Integrated New Construction Home Inspection Software Can Greatly Improve Efficiency and Quality Control

*Developed by Hyphen Solutions, the leading provider of cloud-based residential construction software.*
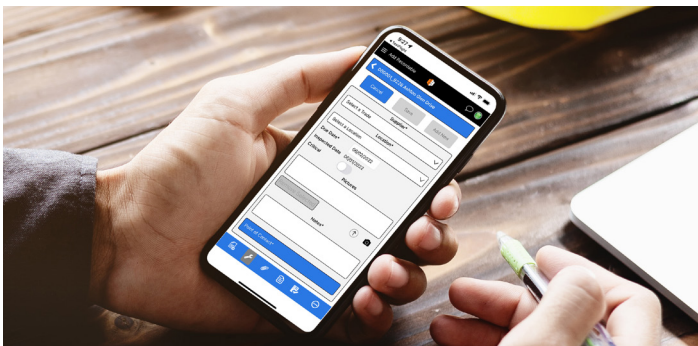

## Take Inspections to the Next Level with BuildPro Integrated Inspection Suite

Hyphen's BuildPro has become the industry standard for scheduling, procurement, collaboration and communications across the entire supply chain in residential construction. The cloud-based platform provides Builders with an integrated Inspections suite to communicate with Suppliers throughout the entire building cycle, including punch lists, milestone inspections and final inspections. This greatly increases the likelihood that product issues and possible warranty problems will be identified throughout the process, rather than at the end.

### Improve Accessibility and Visibility of Shared Data

Hyphen's Inspection suite provides a 24/7 digital connection, so inspection data can be transmitted to all appropriate parties and received within seconds. With mobile access, everyone can get the same up-to-date information anytime, anywhere. Instant information exchange enables corrective actions to be immediately communicated to Suppliers and Trades via SupplyPro to ensure issues are remediated quickly and efficiently.

### Streamline and Improve Reporting

Home inspection reporting software makes it easy to customize and standardize formal reports by transforming a manual format into a digital form. Filling out reports in this manner is far simpler and can easily be done at project sites. This eliminates the need to return to the back-office, compiling information from multiple handwritten or digital sources and reformatting text to create reports.

### Inform Strategic Improvements with Quick and Easy Insights

Important information that was previously buried in paperwork is now instantly retrievable. This solution provides immediate access to insights on Supplier performance, as well as frequently used items and required corrections. Past inspection data can easily be accessed to perform strategic analyses, improve processes and for legal reasons.
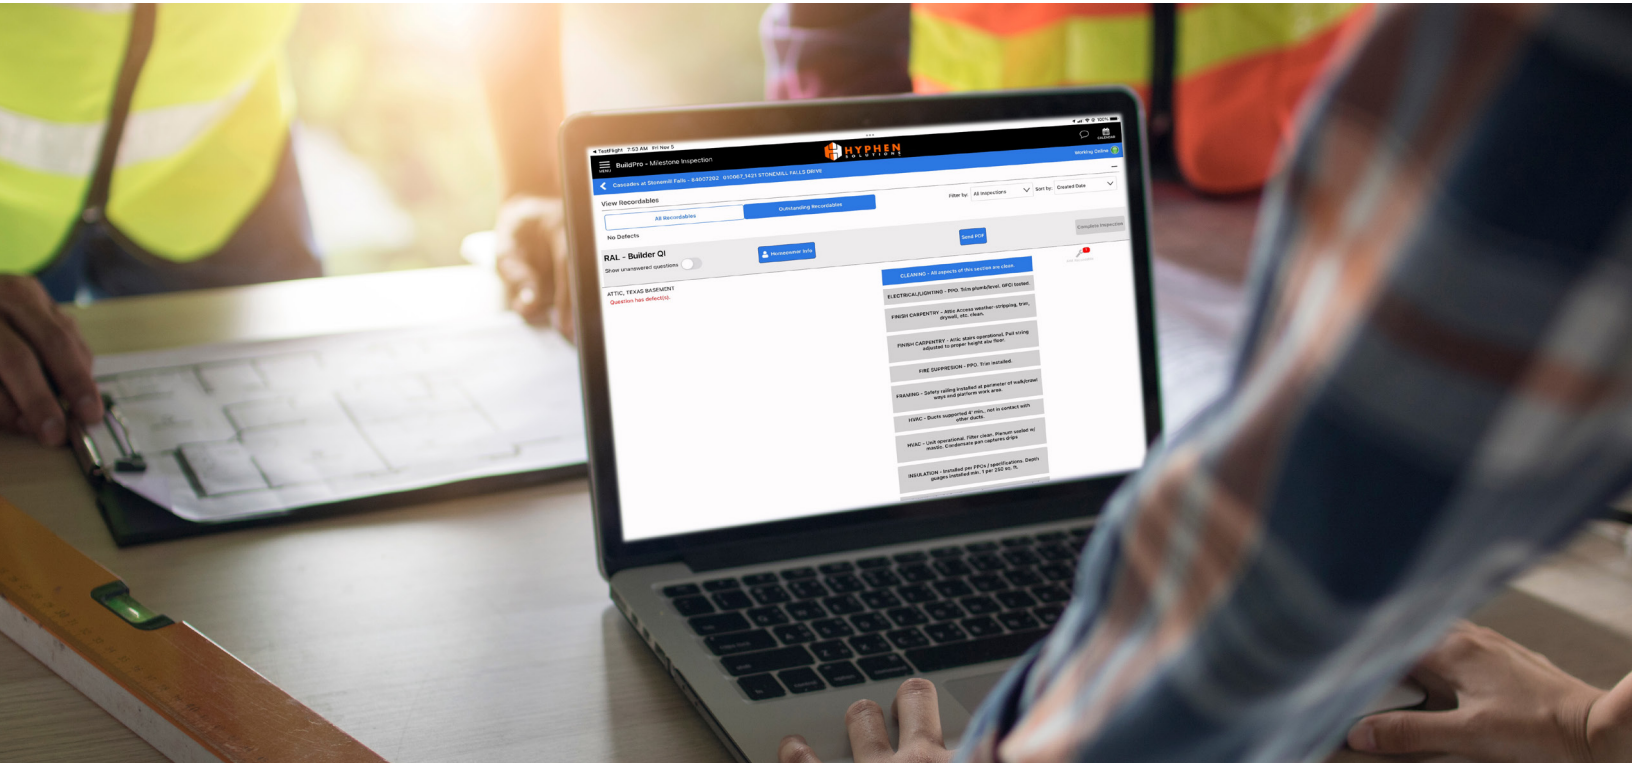

### Enable Efficient Collaboration

Transmitting information digitally cuts down on errors and misunderstandings that can cause costly delays and disagreements among Builders, Suppliers and homebuyers. Everyone can see completed inspections, ordered improvements or repairs with accompanying photos and videos and their progress. Inspections also allows looping in third-party inspectors on any project. This enables inspectors to get up to speed on the job and start reporting back to you quickly and efficiently.

# HYPHEN SOLUTIONS

# HYPHEN INSPECTIONS™

## Simplify Management

Realize significant time savings by tracking milestone inspections and final inspections with greater ease and creating checklists for defects that need correction. The time saved on managing these processes can pay dividends over a single quarter and the entire year.

## Attain ROIs with Hyphen Solutions' Inspections Suite:

✓ Access centralized information

✓ Streamline the inspections process

✓ Enable efficient collaboration

✓ Reduce paperwork and errors

✓ Track defects and long-term supplier performance

# Ready to use Hyphen's Inspections tool to improve inspections and much more?

At Hyphen, we want Builders to be able to use our solutions to their full extent. Discover how built-in home inspection software added within BuildPro can save time and drive your costs down.
