

HYPHEN HOMEFRONT

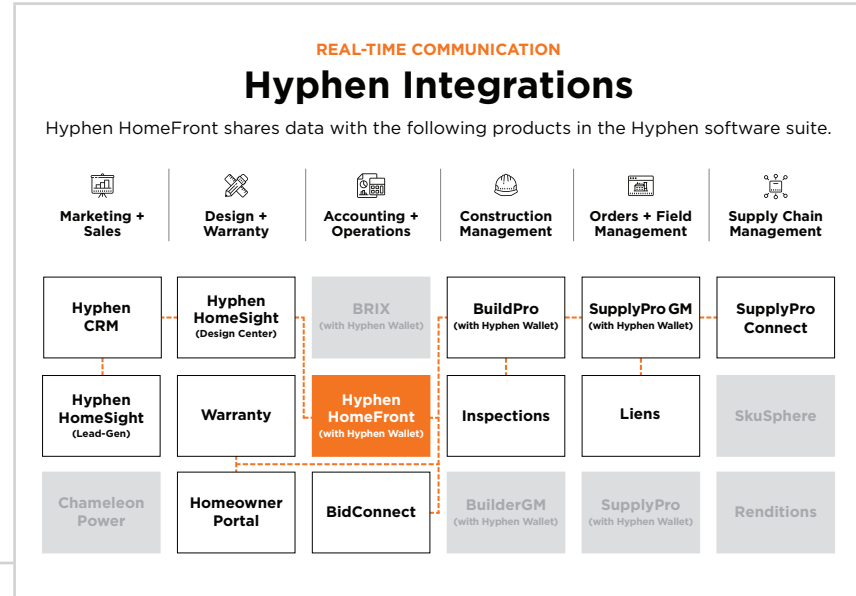

Our Builder-Centric ERP.
Your Accounting System.

Builders

Accounting + Operations

Accounting and GL | Accounts Payable | Automated Payments | Bid Management | Construction Management | CRM (Customer Relationship Management) | ePayments | EPOs (Extra Purchase Orders)/Variance POs | ERP (Enterprise Resource Planning) | Estimating | Job Cost | On-Premise | Purchasing | QuickBooks Integration | Real-Time Communication | Reporting | Sage 300 CRE Integration | Sage Intacct Integration | Sales | Scheduling Dashboards | Smart Assemblies | Takeoffs | Warranty

Hyphen HomeFront is a fully integrated Builder ERP solution that empowers Builders to manage the entire build process—from sales and CRM to service and warranty—all within one easy-to-use system, without replacing your existing accounting software. This best-in-class, on-premise ERP supports complex business models through a robust network of top-tier partner integrations.

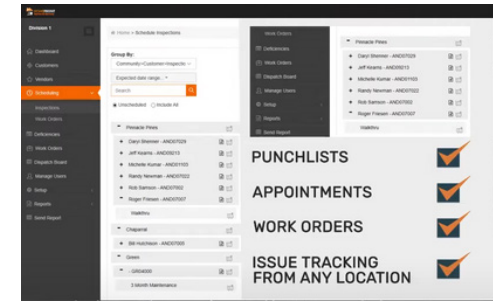

Build Smarter, Communicate Better, Eliminate Mistakes

In today's residential construction market, a Home Builder's success is driven by operational efficiency and the ability to maximize profits at every stage. To stay ahead, Builders must prioritize seamless communication within their business and with Suppliers and Trades. Hyphen HomeFront delivers real-time information, enabling timely decisions and creating efficiencies that eliminate costly mistakes.

An Integrated, Comprehensive ERP Solution for Home Builders

Hyphen HomeFront seamlessly integrates with leading accounting systems, including Sage 100, Sage 300 CRE, Sage Intacct Construction, QuickBooks, and Xero, ensuring immediate and accurate sharing of customer and cost information across all departments within a Builder's organization.

Streamline Your Build Process with Connected, Accurate Information

Every stage of the build process generates large volumes of interconnected information—specifications, approvals, notifications, and transactions. Hyphen HomeFront ensures the integrity of this information throughout the entire building process, keeping everything accurate and connected.

Designed for Home Builders, by Home Builders

Hyphen HomeFront optimizes every stage of the Home Building process within a single, powerful platform. Designed to help Builders reduce build times, eliminate errors, minimize risk, and lower costs, it ensures each project is completed on time and within budget. We understand that delivering a well-built home to a satisfied client is a complex and intricate process.

What Hyphen HomeFront Can Do For You

- 01 Consolidate CRM + Sales Management:** Execute sophisticated campaigns and track prospects to closing. Manage contracts, selections, change orders and documents.
- 02 Speed up Estimating + Purchasing with Precision:** Real-time budgeting and PO release driven by approved sales contracts and change orders. Automated 3-way communication between estimating, sales and the field keeps everyone in sync.
- 03 Share Schedules with Team, Customer + Trades:** Easily communicate with Suppliers and Trades, or manage and share schedules with Hyphen's BuildPro cloud solution.
- 04 Strengthen Supplier Relationships:** Link Trade partners directly with Hyphen SupplyPro. Streamline PO handling, approvals, and payments. Built-in alerts notify you in real-time of schedule changes, PO changes or project updates.
- 05 Optimize Client Satisfaction with Service + Warranty:** Coordinate and control service work from the back-office or the field. Information and documents from sales through construction are available at all times. Drag and drop scheduling of appointments and work orders.
- 06 Automate Information Sharing:** Automate information exchange within the office and to your customers and vendors. Critical notifications and real-time reports delivered without delay.

WHAT'S NEW WITH HOMEFRONT

Hyphen HomeFront Enhancements

Option Rules:

The Option Rules feature allows users to create predefined rules that can include or exclude options during the option selection process.

Deferred Attributes: The deferred attributes feature allows users to add options to an addendum or change order, then select the option attribute values at another point in time.

Modify Approved Options:

The modify approved options feature allows users to make changes to approved options by removing and re-adding the option in a new or existing change order and allowing edits to the option.

- ✓ Seamless integration to popular construction accounting solutions
- ✓ Real-time cash flow management
- ✓ Proforma for proposed and actual deals
- ✓ Price homes and options using multiple scenarios
- ✓ Custom design selection process to maximize profit from upgrades
- ✓ Field POs with variance tracking
- ✓ Punch lists with images and instant or deferred work orders
- ✓ Trade-specific PO rules
- ✓ System-wide notifications and alerts
