

SUPPLYPRO CONNECT

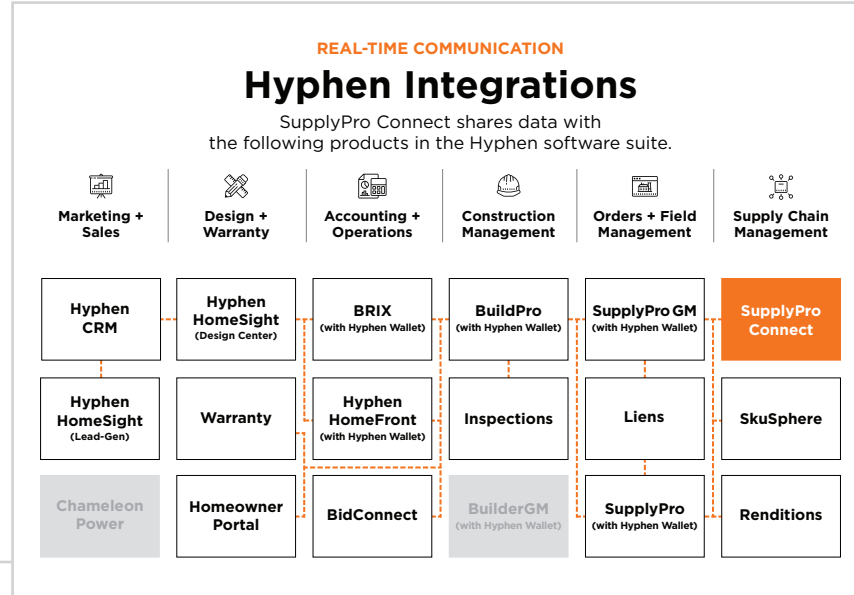

Automate Your Construction Purchase + Procurement Orders

Suppliers

Supply Chain Management

Back-Office Integration | Delivery Location Awareness | Documents | EPOs (Extra Purchase Orders)/Variance POs | Future Orders | Inspections | Job Schedule Updates | Job Scheduling | Order APIs | Partial Shipments | Real-Time Shipment Updates

SupplyPro Connect has made working within the Home Building supply chain simple. This construction purchase order and procurement solution takes the information found in SupplyPro transactions and automates the data into a Trade partner's project management system.

Elimination of Data Entry

As a current SupplyPro user, you already enjoy the ease of online and paperless collaboration. With SupplyPro Connect, you can streamline this process even further by eliminating data entry and reduce the need to access SupplyPro. To accommodate clients with different systems and data requirements, SupplyPro Connect offers data flexibility and several methods to connect with various degrees of automation.

Automatic Communication

Some, or all of the information you gather in SupplyPro are most likely replicated in your in-house accounting, ERP or scheduling software. With SupplyPro Connect, the entry of information in your in-house software is replaced by an automatic feed of data directly from BuildPro. Depending on your solution and configuration, new and future orders, schedules and changes can be automated and pushed in real-time to flow seamlessly into your software solutions.

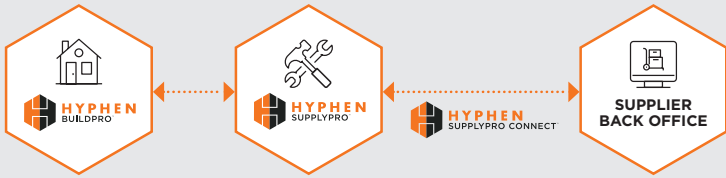

Similarly, the actions you take in SupplyPro to update your Builders on progress can be replaced by familiar actions and process in your software and subsequently updated to BuildPro. Notes, acceptance and completion of orders and changes initiated in your software are automatically communicated to your Builder clients.

How Does it Work?

When a Builder releases orders, schedules, and changes to SupplyPro, the data is simultaneously available for your software to process. Actions taken in your software—such as acceptance and completion—are seamlessly shared back to BuildPro, keeping you and the Builder perfectly in sync.

A truly seamless experience with redundancies eliminated!

A Technical Perspective on Available Methods to Connect

- ✓ REST API through an endpoint utilizing JSON syntax
- ✓ SOAP-based API through an endpoint utilizing XML syntax based on the xCBL 4.0 standard
- ✓ CSV formatted files are delivered via FTP for a simplified import process

WHAT CAN BE AUTOMATED?

- ✓ Orders with acknowledgment
- ✓ Future orders
- ✓ Reschedule with acknowledgment
- ✓ Change orders
- ✓ Order cancellations
- ✓ Order completions
- ✓ Notes
- ✓ Send Builder documents, completions and payment information/remittance

Benefits of SupplyPro Connect

Streamlined Processing: Eliminate the extra steps involved with logging into SupplyPro and manually entering that information into your in-house software solutions.

100% Accuracy: Machine-to-machine messaging facilitates accurate, clear and consistent communication. Eliminate mistakes when manually entering orders.

Real-Time Information: Instant access to new orders, scheduling and changes lay the foundation for timely and relevant resource planning.

Order Clarity: Scopes, instructions and changes are visible to all parties making it easy to update, accept or complete orders in an automated way.

One Data Source: Focus your processing and reporting on the software solutions you have chosen and configured to work best for your company. Eliminate SupplyPro training and monitoring.

Seems great but a bit technical, where do we start?

Our SupplyPro Connect team is dedicated to working with clients like yourself. Whether you have technical resources in-house, work with 3rd party consultants or need a bit more help from us, our team will join yours to get the pieces connected.

Schedule a quick demo with our solutions experts to see if SupplyPro Connect is the perfect fit for your business!
